

ABSTRACT OF THE DISCLOSURE

In an internet connection system for connecting a terminal in each of a plurality of predetermined locations to internet accessed by the terminal, each location, in which a terminal in communication is provided, is discriminated. The used communication band is recorded for each location, and a communication fee is determined based on the used communication band recorded for each location. The communication extent of the access line connected via the gateway is compared for each location, and the terminal is connected to internet via the gateway, to which a less communication extent access line is connected.
